## Personal Profile

I am currently pursuing a Master's degree in machine learning at POSTECH under the supervision of Professor Won Hwa Kim. My research centers around generative models using dynamical systems. Previously, I have specialized in modeling marked temporal point processes using Neural ODEs. Presently, I am exploring diffusion networks for graph structures using topological data analysis.

## Education

### POSTECH

MSc. in Artificial Intelligence

- Class President, Graduate School of Artificial Intelligence

Pohang, Republic of Korea

Feb 2023 - Current

### Chung-Ang University

BSc. in Compute Science and Engineering

- Cumulative GPA: 4.47/4.50
- Summa Cum Laude

Seoul, Republic of Korea

Mar 2020 - Feb 2022

### University of California, Irvine

BSc. in Computer Science and Engineering

- Cumulative GPA: 3.61/4.00
- Dean's Honors List: 5 Semesters

CA, USA

Sep 2015 - Apr 2017

## Research Interests

- Time Series Modeling
- Generative Model
- Dynamical System Modeling
- Graph Machine Learning

## Publications

Generative Modeling for Brain Images from Genetics Information (under review)  
co-author

Decoupled Marked Temporal Point Process using Neural Ordinary Differential Equations  
Yujee Song, Donghyun LEE, Rui Meng, Won Hwa Kim  
*The Twelfth International Conference on Learning Representations (ICLR), 2024*

## Projects

### Topology-aware Graph Diffusion Model for Brain Network Generation

POSTECH

- Analyzed the impact of integrating Topological Data Analysis (TDA) into graph generation for brain networks.
- Conducted experiments using state-of-the-art methods to assess the influence of TDA on graph generation outcomes.
- Processed brain network data from the ADNI dataset into a suitable format for graph generation purposes.

Pohang, Korea

Jan 2024 - Mar 2024

### Efficient High Order Feature Transform for few-shot segmentation

POSTECH

- Adapted a 3D Feature Transform layer to a 2D Feature Transform layer for application in segmentation tasks.
- Completed as part of a deep learning class project.

Pohang, Korea

Sep 2023 - Dec 2023

### Alzheimer Disease Diagnosis from Brain Signal

POSTECH, joint research with KIST

- Utilized resting EEG, resting ERP, and attention ERP signals for Alzheimer Disease (AD) diagnosis.
- Processed and analyzed brain signals to develop neural architectures for effective diagnosis.
- Collaborated with a researcher from KIST to enhance diagnostic methods using brain signal data.

Pohang, Korea

Aug 2023 - Dec 2023
